

REAL-LINK, PORTABLE TIME AND ATTENDANCE SOLUTION

Presented by Real Time DC -software and hardware solutions

REAL LINK AT A GLANCE

Real-Link time and attendance system allows you to keep track of when employees have been on and off site, employee shift start and end times and who is on site any other time.

You have access to all of this information in real-time-no checking log cards or typing up information after the event. There is also no need for an expensive electronic clocking in and out system or a device that must be hard-wired to a network, as REAL-LINK can work from a mobile phone or a cost-effective Timebox.

NFC technology allows the collection of data, which is then transferred immediately to the server meaning that you can access the information from a web-based login.

WHAT IS REAL-LINK?

RealLink is an app dedicated for monitoring, regular-checking and digital reporting. It can be used in a variety of contexts including but not limited to incident reporting, area manager reporting, time and attendance, asset checks, toilet/fire doors/noise checks, lone worker rounds.

Benefits of REAL-LINK time and attendance system

- **Remote staff monitoring**-You have the ability to identify who is/has been on site.
- **Time-Saving Solution**-No need to spend time checking clocks or entering data from timesheets.
- **Proof for compliance**-You will have reports to show who has been on-site for safety reasons
- **Portable Solution**-if you have a six-month contract on a particular site it doesn't matter as the phone can be picked up, moved to another site and we will update the information on the system.
- It can be **integrated** with your existing IT systems.
- **Minimal cost**-No upfront costs, the software license for Real-Link is charged **monthly/quarterly**.

About The Reports

The Real-Link time and attendance system enables you to see in real-time when your employees have entered/exited a site, started/ended a shift. The reports can be downloaded as a PDF or CSV file for further reporting.

You also have the option to view a 'work time report' which will show the number of hours an employee has worked in comparison to other staff members.

How does it work?

- Each employee is issued with a RFID tag that uniquely identifies them-this can be a printed ID card, a key fob or a sticker stuck to another identity card.
- When entering/leaving the site, or starting/ending a shift, employee touches RFID tag to the mobile phone or Timebox.
- The details of who that is, the time, date and location are sent to the server in real time via the mobile phone network.
- This information can then be viewed from any device with internet connection by logging in to a website. The data can be easily exported and sent to other IT systems.

RealTime DC provides Real-Link services for the following:

*building sites,
outdoor events,
facility management companies,
schools, colleges, universities,
multiple-site businesses,
casual labouring,
bar, restaurants, nightclubs,
security companies and many more...*
